

OOP as it Should Be Level 1

OOP

Level 1

What is
OOP and Why??

Functional (FP) vs Object Oriented (OOP)

University System Example (FP)

- AddStudent
- UpdateStudent
- DeleteStudent
- CalculateAverage
- AddCourse
- UpdateCourse
- DeleteCourse
- EnrollStudentInCourse
- UnEnrollStudentFromCourse
- HowManyStudentsInCourse
- Doctor (Add, Edit, Delete)
- AssignCourse ToDoctor
- SendEmail ToStudent
- Send TextMessage ToStudent
- SendEmailToDoctor
- Send TextMessage ToDoctor
- CallStudent
- CallDoctor
- AddEmployee
- UpdateEmployee
- DeleteEmployee
- CalculateSalary
- PaySalary
-

Simply

You can have thousands of functions in your System!!!!

The problem is not with number of functions at all 😊

The problem is with organizing them and the way you look
at them 😊

To make it simple for you 😊

What if you have thousands of contacts and phone numbers and all

these contacts and numbers are **not organized!**

You will have a nightmare 😊

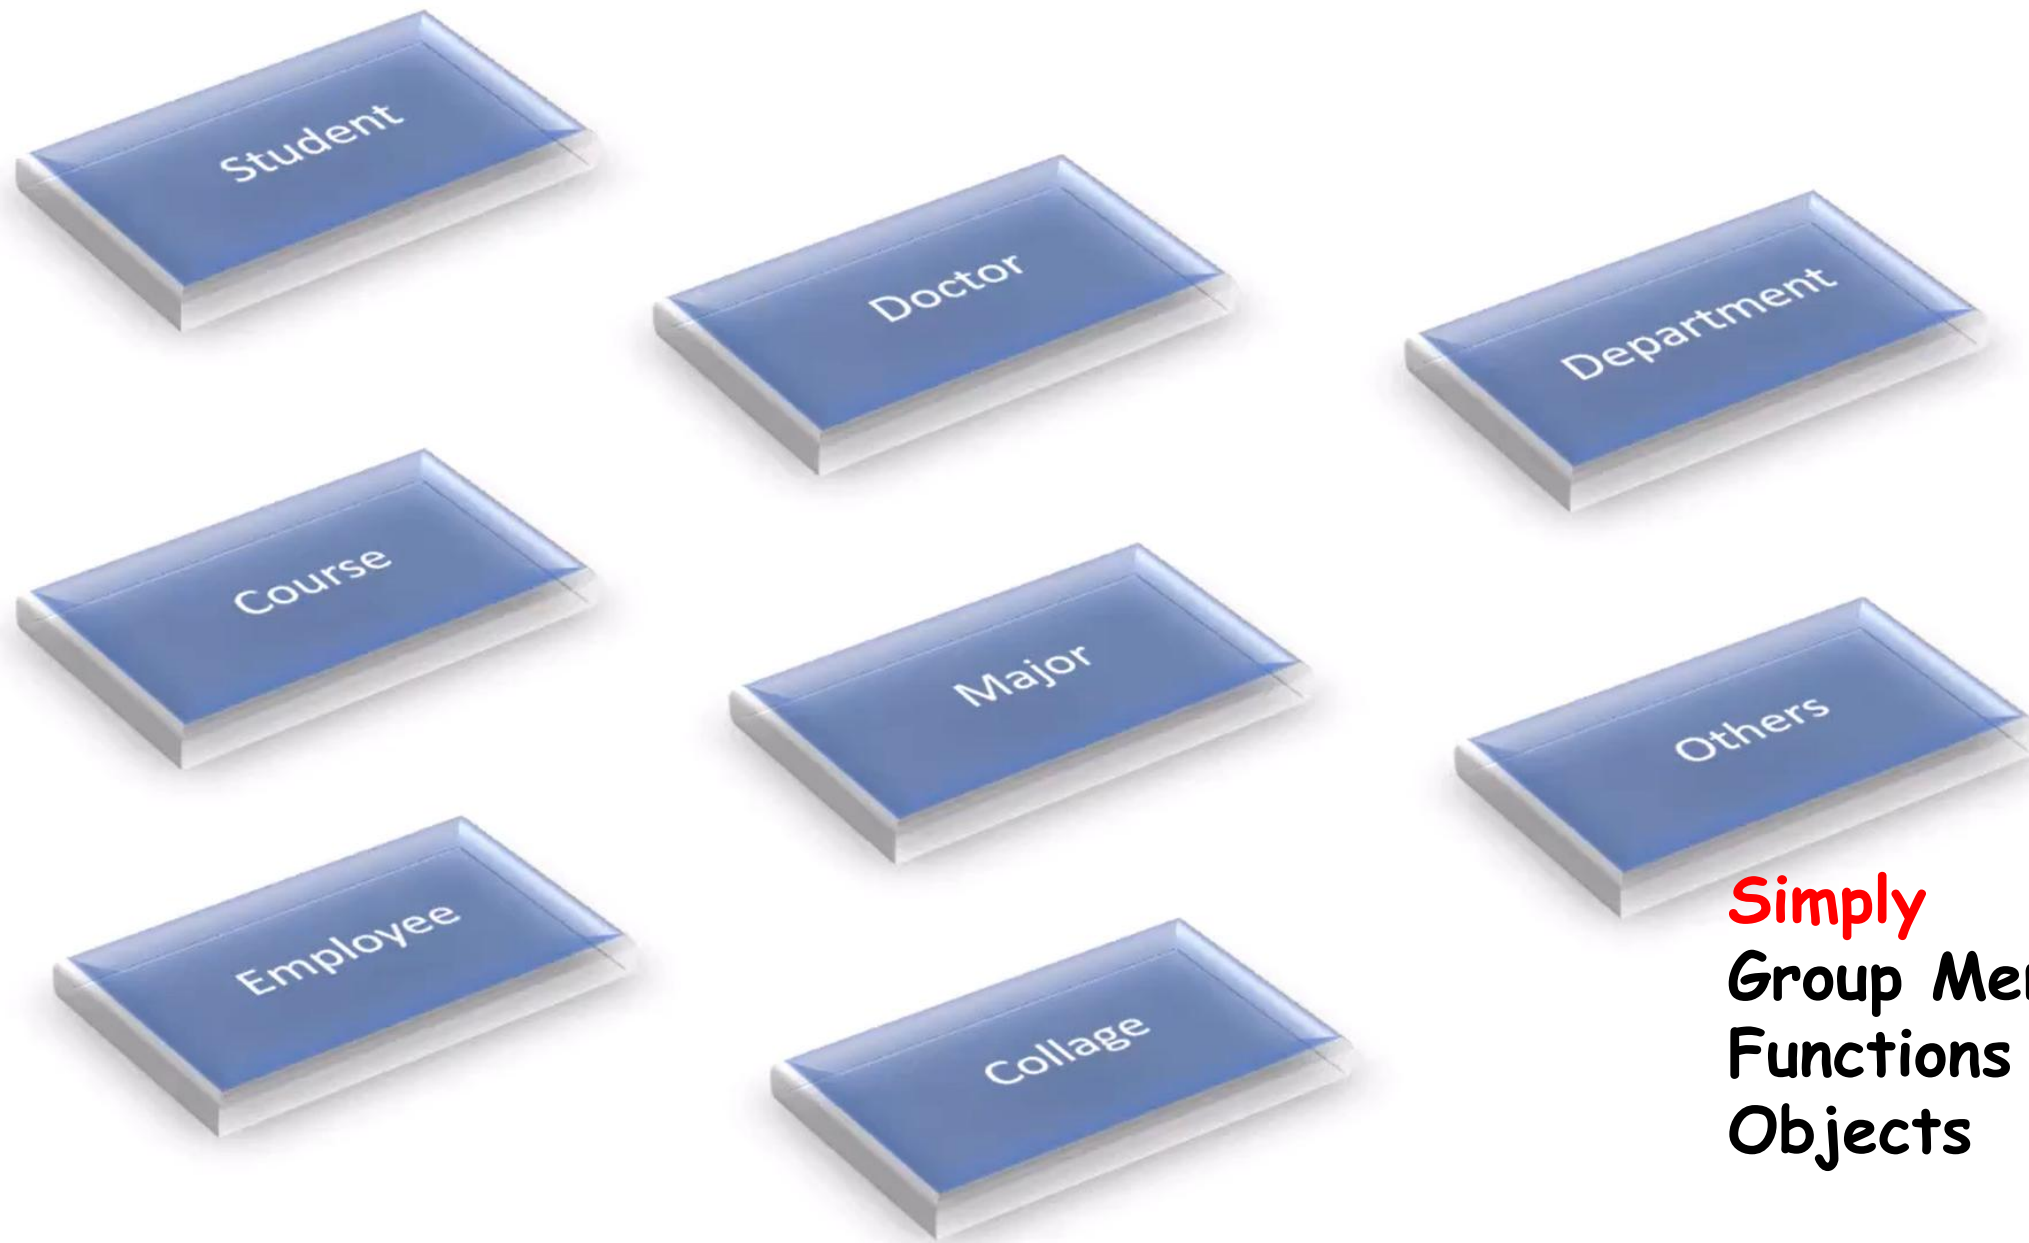

OOP will solve this Problem for you

OOP Makes Programming and the Way you look at programming near to the way you look at your life

Functional (FP) vs Object Oriented (OOP)

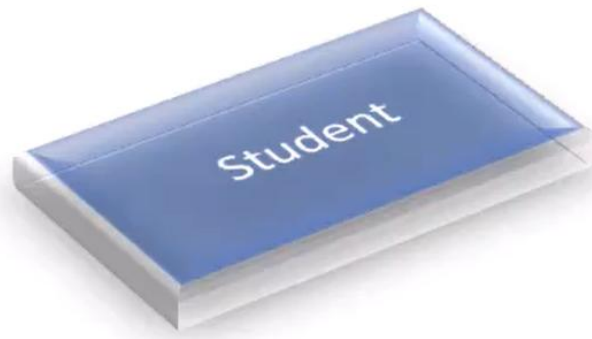

University System Example (OOP)

Simply
Group Members and
Functions Inside Related
Objects

Functional (FP) vs Object Oriented (OOP)

Student Object

Student1.Name

Student1.Email

Student1.GetEnrolledCourses()

Student1.CalcuateAverage()

Student1.SendEmail(Subject, Body)

Student1.EnrollInCourse(10)

Student1.PayFees

Student1.UnEnrolFromCourse(10)

You can do whatever you want with a certain student through its object

Thank you 😊
