Algorithms & Problem Solving

Level 4

Is Date Within Period

Definition

- sDate Struct: Represents a single date containing the day, month, and year.
- sPeriod Struct: Represents a specific time period with a start and end date:
 - StartDate: Start date
 - EndDate: End date
- enDateCompare Enum: To determine the relationship between two dates:
 - Before = -1 (Date before date)
 - Equal = 0 (Dates are equal)
 - After = 1 (Date after date)

Explanation:

- This program reads a time period (start and end dates) and then reads another date, and checks whether this date falls within the period or not (including the start and end days).

Procedures

- 1 Read the period start date
- 2 Read the period end date
- 3 Read a date to verify
- 4 Compare the entered date with the period start and end dates
- 5 Determine if it falls within the period
- 6 Print the result

Example:

Enter Period:

Start Date: 1/1/2022

End Date: 10/1/2022

Date to check: 5/1/2022

Yes, Date is within period.

Explanation:

- The program compares the entered date with the start and end dates of the period:
 - If it is neither before nor after them, then it is within the period.
- That is, the logical relationship used is:
 - NOT (before the start OR after the end)

Note:

- The start and end dates must be in the correct chronological order (i.e., the start cannot be after the end).

Summary

- ✓ The program accurately checks whether a given date falls within a specific time period.
- ✓ It can be used in applications such as vacation management, bookings, or verifying the validity of specific dates.

Thank you 😊
