MAN

Metropolitan Area Network

The background of the slide features a complex, abstract network of thin, dark lines crisscrossing the entire frame, resembling a web or a dense circuit board. In the lower portion of the image, there are dark silhouettes of several people. Two individuals are standing in the center, facing each other, while others are seated or crouching in the foreground, looking towards the center. The overall tone is dark and technical.

Computer Foundations

Level 2

What is Networks?

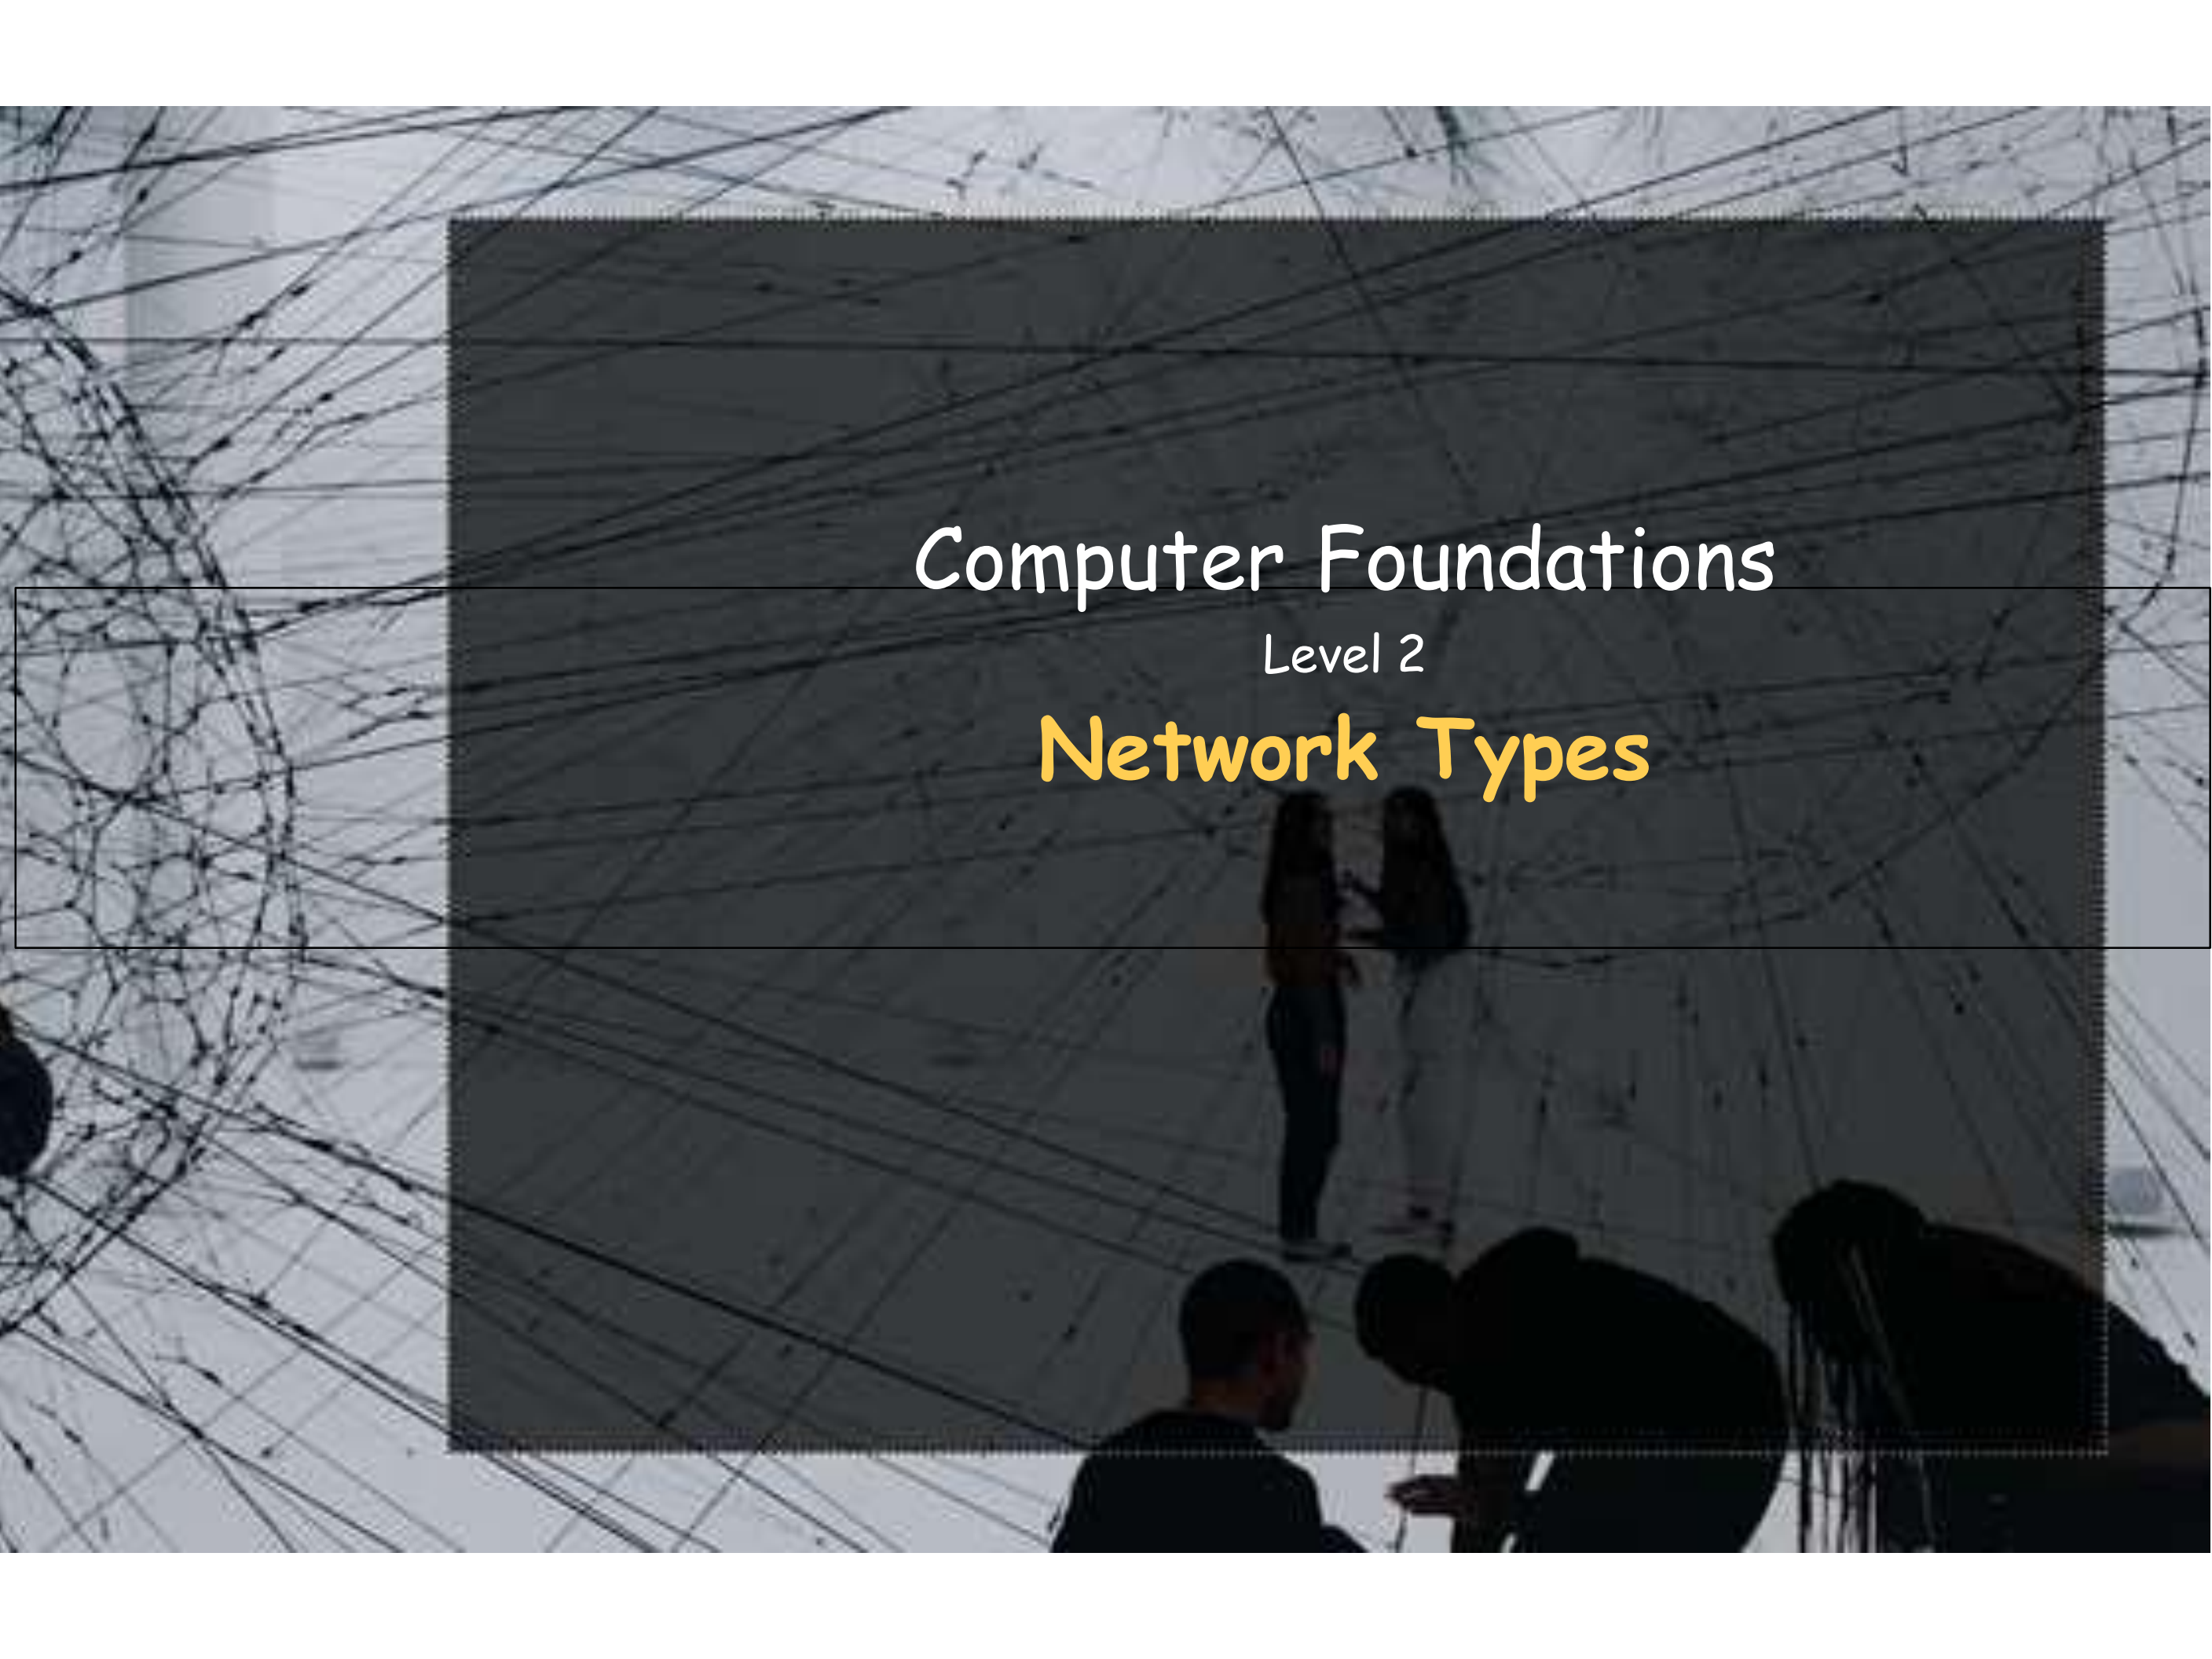

What is Network?

Network: is a group of connected computer and devices.

- For example, the computers, phones, and other devices that your family owns are all part of your home computer network.
- When you get a new tablet and enter in the Wi-Fi password, you're joining that tablet to your home computer network.

Why do we need Network?

- Devices in the same network can easily communicate and share resources with each other.
- For example : you can control your TV with your mobile, or you can stream videos from your mobile to your TV.

The background of the slide features a complex, abstract network of thin, dark lines crisscrossing a light gray background. In the lower portion of the image, there are dark silhouettes of several people. Two individuals are standing and facing each other in the center, while a group of three or four people is huddled together in the foreground, looking down at something out of frame. The overall aesthetic is technical and interconnected.

Network Types

Network Types

Computer Foundations

Level 2

1- LAN

What is LAN?

LAN: Local Area Network that has a group of connected devices.

- LAN is a type of network made up of nearby computers.
- A LAN can have anywhere from a few devices (like a home network) to hundreds of devices (like a school or hospital)
- Large organizations like colleges can have multiple LANs - maybe one per building.

Computer Foundations

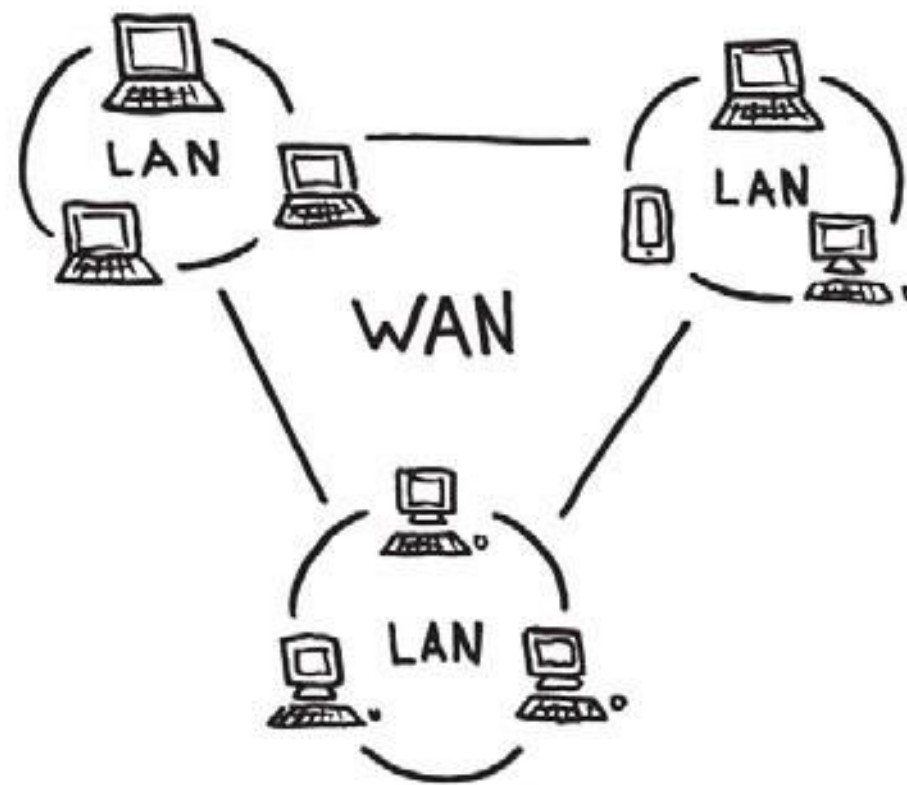

Level 2

2- WAN

What is WAN?

WAN: Wide Area Network.

- WAN is made of connected LANs that are far from each other (like in different parts of the country or world).
- WANs connect thousands or even millions of devices.

Level 2

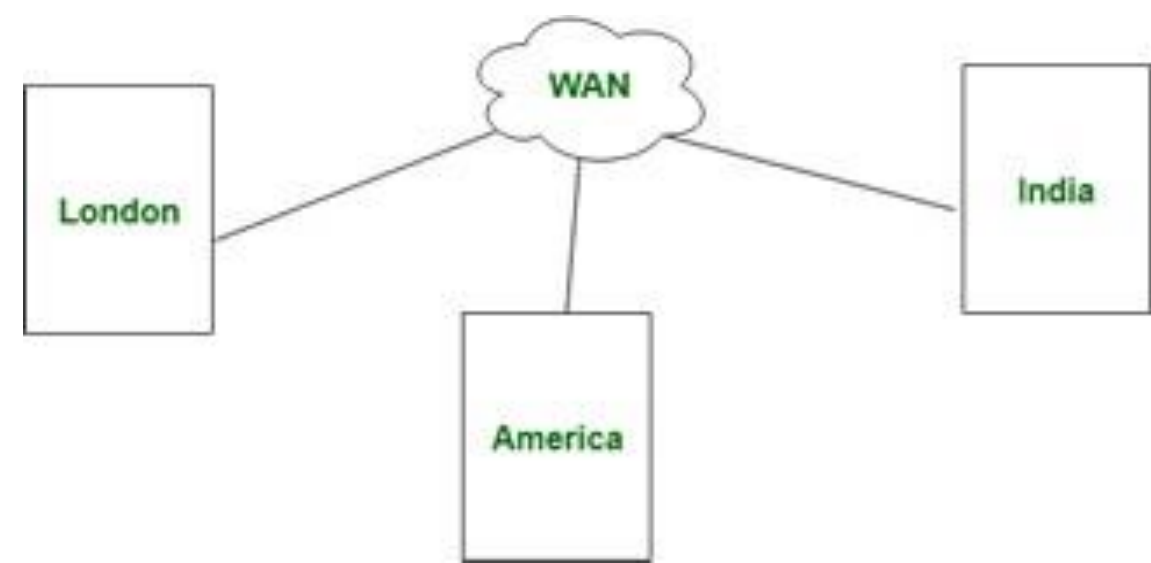

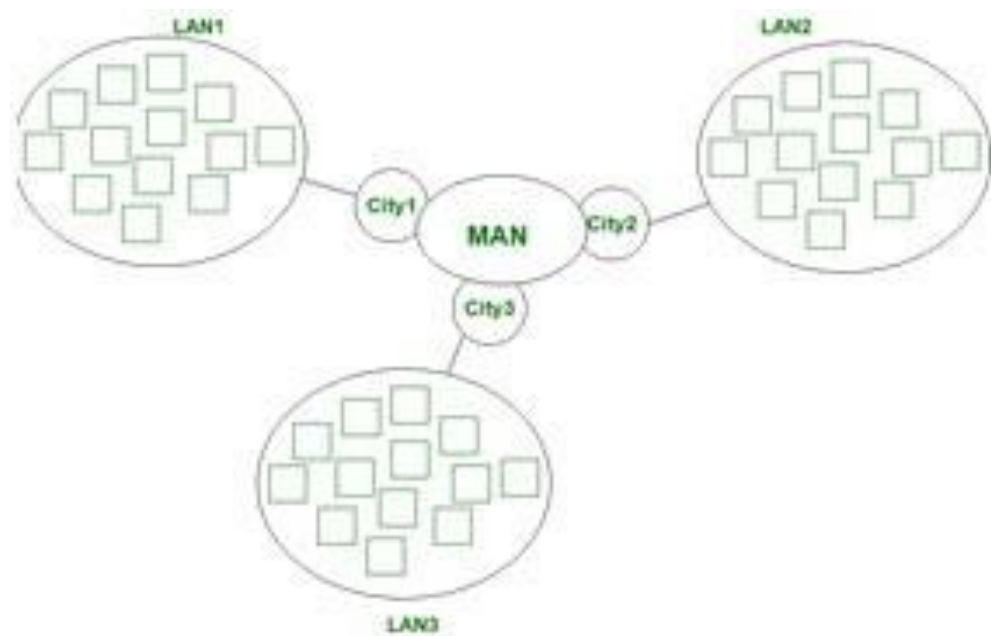

3- MAN

What is MAN?

MAN: Metropolitan Area Network.

- It is a medium-sized network Larger than LAN and Smaller than WAN.
- MAN can cover a broad area such as cities and towns.

MAN

VS

WAN

MAN stands for Metropolitan Area Network

WAN stands for Wide area network.

Faster Transmission Speed, less latency

Slower Transmission Speed, high letancy

Less noise and error

More noise and error

MAN has moderate congestion.

WAN has high congestion

Low cost of installation & design

High cost of installation and design

Differences

Thank you 😊
