IP Part 3 (IP Address Types)

Computer Foundations

Level 2

What are the Types of IP Addresses?

Types of IP Addresses:

Four Types:

Public

- IP which can be seen on the internet is public.
- The IP address assigned to the home's network by the ISP is known as a public IP address.

Private

- A private network is a computer network that uses its own private address space of IP addresses.
- Private IP address ranges are defined under both IPv4 and IPv6 standards.

Static

- An IP address that does not change is known as a static IP address.
- The majority of users do not require static IP addresses. (it is expensive)

Dynamic

A dynamic IP address changes from time to time. Because it is more cost-effective for Internet Service Providers (ISPs) to assign dynamic IP addresses to their clients,

Thank you 😊
