Modem vs Router vs Gateway

Modem vs Router vs Gateway

The background of the slide features a complex, abstract network of thin, dark lines crisscrossing over a lighter, textured surface. In the lower portion of the image, there are dark silhouettes of several people, some standing and some leaning over, suggesting a collaborative work environment or a meeting. A large, dark, semi-transparent rectangular box is centered on the slide, serving as a backdrop for the text.

What is Gateway?

What is Gateway?

Gateway is:

- A computer that sits between different networks or applications.
- The gateway converts information, data or other communications from one protocol or format to another.
- A router may perform some of the functions of a gateway.
- An Internet gateway can transfer communications between an enterprise network and the Internet.

Computer Foundations

Level 2

**Is gateway same as
router?**

Is gateway same as router?

- A router is a device that is capable of sending and receiving data packets between computer networks.
- A Gateway, on the other hand, joins dissimilar systems.
- Gateway it is defined as a network entity that **allows a network to interface with another network with different protocols.**

Computer Foundations

Level 2

**Is gateway better
than router?**

Is gateway better than router?

It Depends:

- If your devices are on the same network, then routers and gateways can be peer to peer.
- But if you want to connect two different networks with different protocols, the gateway can suit your demands.

The background of the slide features a complex, abstract network of thin, dark lines crisscrossing a light blue-grey field. In the lower portion of the image, the dark silhouettes of several people are visible, appearing to be in a collaborative setting, possibly looking at a large screen or working together. The overall aesthetic is technical and modern.

What is Mesh Network?

Mesh Network

What is Mesh Network?

- Mesh networks still have a router that connects to a modem, but it includes mini WiFi devices that are set up around your home.
- These mini WiFi devices, or nodes, communicate with each other and repeat the signal from your router from one node to another, which can extend the range of your wireless network.
- This means that your Wi-Fi connection will be strong in every corner of your house, even in areas where you may have previously had a hard time connecting.

Thank you 😊
