

Computer Foundations Level 2

The background of the slide features a complex, abstract network of thin, dark lines crisscrossing the entire frame, resembling a web or a circuit board. In the lower portion of the image, there are dark silhouettes of several people. Two individuals are standing in the center, facing each other, while others are seated or crouching in the foreground, looking towards the center. The overall tone is dark and technical.

**Who wants your IP
Address?**

Virtual Private Network (VPN)

Computer Foundations

Level 2

**How to protect your IP
Address?**

What is VPN?

- A VPN (**v**irtual **p**rivate **n**etwork) is the easiest and most effective way for people to protect their internet traffic and keep their identities private online.
- As you connect to a secure VPN server, your internet traffic goes through an **encrypted tunnel that nobody can see into**, including hackers, governments, and your internet service provider.
- It also **changes your IP address completely.**
- **Placing your geolocation** hundreds or maybe thousands of miles from where you are accessing the internet.

Thank you 😊
