

Computer Foundations Level 2

The background of the slide features a complex, abstract network of thin, dark lines crisscrossing over a lighter, textured surface. In the lower portion of the image, the silhouettes of several people are visible, appearing to be in a collaborative setting, possibly a meeting or a workshop, with some individuals leaning over a table or screen.

What is API?

Application **P**rogramming **I**nterface (**API**) is a set of rules and protocols that allows different software applications to communicate and exchange data.

- It works as a middle layer that handles requests and responses between applications.
- It allows developers to reuse existing services (maps, payments, login, etc.).
- It powers common features in apps and websites.
- Its goal is to simplify integration and speed up development.

Thank you 😊
