

C#

Level 1

Single-Line / Multiple-Line
Comments

C#

Level 1

Single-Line / Multiple-Line Comments

Definition

- ◆ Comments are text written inside the source code to explain what the code does.
- ◆ Comments are ignored by the compiler, so they do not affect the execution of the program.
- ◆ C# provides two main types of comments:
 - ▣ Single-line comments → ``//``
 - ▣ Multiple-line comments → ``/* ... */``

Explanation

❑ Single-Line Comment ``//``

- ◆ A single-line comment starts with ``//``.
- ◆ Everything after ``//`` on that line is treated as a comment.
- ◆ The comment itself is not displayed.

❑ Multiple-Line Comment ``/* ... */``

- ◆ A multiple-line comment starts with ``/*`` and ends with ``*/``.
- ◆ It can contain several lines of text.

Procedures

1 Write a Single-Line Comment

```
// This is a comment
```

➡ Result: The compiler ignores this line.

2 Write a Multiple-Line Comment

```
/*
```

```
    This is a comment  
    that spans multiple lines.
```

```
*/
```

➡ Result: All lines between `/\*` and `\*/` are ignored.

3 Comment Code Temporarily

◆ Comments can also be used to temporarily disable a line of code.

```
// Console.WriteLine("This will not execute");
```

```
Console.WriteLine("This will execute");
```

➡ Result:

This will execute

💡 Example

```
internal class Program
{
    static void Main(string[] args)
    {
        // This is a single line comment
        Console.Write("My Name is Sara Alterkawi ");
        /*
            This is
            a multiple line
            comment.
        */
        Console.ReadKey();
    }
}
```

➡ Result:
My Name is Sara Alterkawi

Note

◆ Comments are useful for:

- ▣ Explaining code
- ▣ Documenting complicated logic
- ▣ Making code easier to understand
- ▣ Temporarily disabling code during testing

◆ Good comments should explain ****why**** something is done when the code itself is not obvious.

⊘ Warning

⚠ A multiple-line comment must be closed with `\*/`.

✗ Incorrect:

```
/*
```

This comment is not closed

✓ Correct:

```
/*
```

This comment is closed

```
*/
```

Comparison

Single-Line Comment

- ✓ Uses `//`
- ✓ Applies to one line
- ✓ Quick and simple

Multiple-Line Comment

- ✓ Uses `/\* ... \*/`
- ✓ Can span multiple lines
- ✓ Useful for longer explanations

✦ Summary

- ✓ Comments explain or document source code
- ✓ Comments are ignored during program execution
- ✓ ``//`` is used for single-line comments
- ✓ ``/* ... */`` is used for multiple-line comments
- ✓ Comments can also temporarily disable code

Thank you 😊
