DateTime Static Properties

C#

Level 1

DateTime Static Properties

Definition

 DateTime Static Properties

 `DateTime` provides static properties for getting commonly needed date and time values directly.

Explanation

Current Local Date & Time

 ``DateTime.Now`` returns the current local date and time.

Today's Date

 ``DateTime.Today`` returns the current local date with the time set to ``00:00:00``.

Current UTC Date & Time

 ``DateTime.UtcNow`` returns the current date and time in UTC.

Procedures

1. Use the required `DateTime` static property.
2. Store or use the returned `DateTime` value.
3. Display or process the value as needed.

💡 Example

```
Console.WriteLine(DateTime.Now);  
Console.WriteLine(DateTime.Today);  
Console.WriteLine(DateTime.UtcNow);
```

➡ Result

Current local date and time.

Today's date at 00:00:00.

Current UTC date and time.

Note

- ◆ `Now` → local date + time.
- ◆ `Today` → local date only, time is `00:00:00`.
- ◆ `UtcNow` → UTC date + time.
- ◆ `MinValue` and `MaxValue` define the supported `DateTime` range.

Comparison

 `DateTime.Now`

✓ Current local date and time.

 `DateTime.Today`

✓ Current local date.

✓ Time is `00:00:00`.

 `DateTime.UtcNow`

✓ Current UTC date and time.

✦ Summary

- ✓ `Now` → current local date and time.
- ✓ `Today` → today's date at midnight.
- ✓ `UtcNow` → current UTC date and time.
- ✓ `MinValue` → minimum supported `DateTime`.
- ✓ `MaxValue` → maximum supported `DateTime`.

Thank you 😊
