

The background is a blurred image of a computer monitor. It shows a dark-themed code editor with various lines of code in different colors (blue, green, white). At the bottom, a taskbar is visible with several application icons, including what looks like a web browser, a file explorer, and some development tools. The overall image is out of focus, serving as a backdrop for the text.

C#

Level 1

String Interpolation

C#

Level 1

String Interpolation

Definition

String Interpolation

 String interpolation allows you to insert variables directly inside a string using `\$` before the string.

Explanation

` \$ ` Prefix

-  Add ` \$ ` before the string to enable interpolation.

-  Variables or expressions are placed inside `{}`.

Inserting Variables

-  ` \$"Ms. {firstName} {lastName}, Code: {code}" ` combines multiple variables into one string.

` string.Format() `

-  ` string.Format() ` can also be used to insert values into a formatted string.

-  In this example, `{0}` refers to the `fullName` value.

Procedures

1. Create the variables.
2. Add `\$` before the string.
3. Put variables inside `{}`.
4. Store the resulting string.
5. Print the formatted string.

💡 Example

```
string firstName = "Dania";  
string lastName = "Aljaseem";  
string code = "107";  
string fullName = $"Ms. {firstName} {lastName}, Code: {code}";  
Console.WriteLine("Full Name: {0}", fullName);
```

➡ Result

Full Name: Ms. Dania Aljaseem, Code: 107

Note

- ◆ ``$`` must be placed before the string to enable interpolation.
- ◆ ``{}`` is used to insert variables or expressions.
- ◆ String interpolation makes combining text and variables easier to read.

Comparison

String Interpolation

- ✓ ``$"Hello {name}"``
- ✓ More readable and direct.

``string.Format()``

- ✓ ``"Hello {0}"`` with ``string.Format(...)``
- ✓ Useful for traditional format-string syntax.

✦✦ Summary

- ✓ String interpolation inserts variables directly into a string.
- ✓ Use ``$`` before the string and ``{}`` around variables.
- ✓ ``string.Format()`` provides an alternative formatting method.

Thank you 😊
