

The background is a blurred image of a computer monitor. It shows a dark-themed code editor with various lines of code in different colors (blue, green, yellow). At the bottom, a taskbar is visible with several application icons, including what looks like a web browser, a file explorer, and some development tools. The overall image is out of focus, serving as a backdrop for the text.

C#

Level 1

Relational Operators

C#

Level 1

Relational Operators

Definition

Relational Operators

-  Used to compare two values.

-  The result is always a Boolean: true or false.

💡 Example

```
int x = 10;  
int y = 20;  
Console.WriteLine(x < y);
```

➡ Result:
True

Note

- ◆ Relational expressions produce true or false.
- ◆ Commonly used in decision-making and loops.
- ◆ Example: `age >= 18` checks whether age is at least 18.

Comparison

 ==

- ✓ Equal to
- ✓ $10 == 10 \rightarrow \text{true}$

 !=

- ✓ Not equal to
- ✓ $10 != 20 \rightarrow \text{true}$

 >

- ✓ Greater than
- ✓ $20 > 10 \rightarrow \text{true}$

 <

- ✓ Less than
- ✓ $10 < 20 \rightarrow \text{true}$

 >=

- ✓ Greater than or equal to
- ✓ $20 >= 20 \rightarrow \text{true}$

 <=

- ✓ Less than or equal to
- ✓ $10 <= 20 \rightarrow \text{true}$

✦ Summary

- ✓ Compare two values and return true or false.
- ✓ `==` → Equal
- ✓ `!=` → Not equal
- ✓ `>` → Greater than
- ✓ `<` → Less than
- ✓ `>=` → Greater than or equal
- ✓ `<=` → Less than or equal

Thank you 😊
