

C#

Level 1

Do While Loop

C#

Level 1

Do While Loop

Definition

do...while Loop

-  Repeats a block of code while a condition is true.
-  The code executes before the condition is checked.
-  Therefore, the loop body always executes at least once.

Procedures

1. Execute the code inside do.
2. Check the while condition.
3. If true → execute the code again.
4. If false → stop the loop.

💡 Example

```
int i = 1;
do
{
    Console.WriteLine(i);
    i++;
}
while (i <= 5);
```

➡ Result

```
C# while Loop: Iteration 1
C# while Loop: Iteration 2
C# while Loop: Iteration 3
C# while Loop: Iteration 4
C# while Loop: Iteration 5
```

Note

- ◆ A do...while loop executes at least once, even if the condition is initially false.
- ◆ The while condition ends with a semicolon:
`} while (condition);`

Comparison

while

- ✓ Checks the condition before execution.
- ✓ May execute zero times.

do...while

- ✓ Executes the code before checking the condition.
- ✓ Always executes at least once.

✦ Summary

- ✓ do...while executes the code first and checks the condition afterward.
- ✓ The loop continues while the condition is true.
- ✓ The body always runs at least once.
- ✓ while → condition first.
- ✓ do...while → code first.

Thank you 😊
