Math

Definition

Math Class

 The *C#* Math class provides built-in methods for common mathematical operations.

Explanation

 `Math.Max(x, y)`

 Returns the larger value.

 `Math.Min(x, y)`

 Returns the smaller value.

 `Math.Sqrt(x)`

 Returns the square root of a number.

 `Math.Abs(x)`

 Returns the absolute value by removing the negative sign.

 `Math.Round(x)`

 Rounds a number to the nearest whole number by default.

💡 Example

```
Console.WriteLine("Max of 5, 10 is: {0}", Math.Max(5, 10));  
Console.WriteLine("Min of 5, 10 is: {0}", Math.Min(5, 10));  
Console.WriteLine("Squir Root of 64 is: {0}", Math.Sqrt(64));  
Console.WriteLine("Absolute (positive) value of -4.7 is: {0}", Math.Abs(-4.7));  
Console.WriteLine("Round of 9.99 is: {0}", Math.Round(9.99));
```

➡ Result

Max of 5, 10 is: 10

Min of 5, 10 is: 5

Squir Root of 64 is: 8

Absolute(positive) value of -4.7 is: 4,7

Round of 9.99 is: 10

Note

- ◆ `Math.Round()` uses banker's rounding for exact halfway values by default.
- ◆ Example: `Math.Round(9.5)` → 10, because 10 is the nearest even integer.

Comparison

-  `Math.Max()` → Largest value
-  `Math.Min()` → Smallest value
-  `Math.Sqrt()` → Square root
-  `Math.Abs()` → Absolute value
-  `Math.Round()` → Nearest whole number

✦ Summary

- ✓ `Math.Max()` → largest.
- ✓ `Math.Min()` → smallest.
- ✓ `Math.Sqrt()` → square root.
- ✓ `Math.Abs()` → absolute value.
- ✓ `Math.Round()` → rounds to the nearest whole number.

Thank you 😊
