

The background is a blurred image of a computer monitor. It shows a dark-themed code editor with various lines of code in different colors (blue, green, yellow). At the bottom, a taskbar is visible with several application icons, including what looks like a web browser, a file explorer, and some development tools. The overall image is out of focus, emphasizing the text overlay.

Web VS Desktop Applications

C#

Level 1

Web VS Desktop Applications

Definition

Web-Based Applications

 Applications accessed through a web browser, usually relying on remote servers.

 Normally do not require installation on the user's computer.

Explanation

Web Applications

-  Accessed through a browser.
-  Usually depend on remote servers for processing or data.
-  Generally easier to access and update.
-  Offline use is usually limited.

Desktop Applications

-  Installed and run mainly on the local computer.
-  Can often work without an Internet connection.
-  Can use local hardware and resources directly.
-  Require installation and local storage.

Procedure

1 Web Application:

Browser → Internet → Server → Application/Data

2 Desktop Application:

Computer → Installed Application → Local Resources/Data

💡 Example

Microsoft Word, Excel, Photoshop, Web Browsers

Note

- ◆ Desktop applications are not automatically more private or cheaper.
- ◆ Modern desktop applications can support automatic updates.
- ◆ Web applications can also provide high performance depending on their design.

Comparison

▨ Web Application

- ✓ Usually does not require installation.
- ✓ Usually requires Internet access.
- ✓ Accessed through a web browser.
- ✓ Updates are usually handled on the server.
- ✓ More portable across compatible devices.
- ✓ Offline use is generally limited.

▨ Desktop Application

- ✓ Usually requires installation.
- ✓ Can often work without Internet.
- ✓ Runs through an installed application.
- ✓ Uses local storage and computer resources.
- ✓ Can provide greater hardware access.
- ✓ May require updates on the user's device.

✦ Summary

- ✓ Web applications are accessed through a browser and generally rely on remote services.
- ✓ Desktop applications are installed and run mainly on the local computer.
- ✓ Web applications are generally easier to access and update.
- ✓ Desktop applications can offer offline use and greater local resource access.
- ✓ Neither approach is always better; the choice depends on the application requirements.

Thank you 😊
