

The background is a blurred image of a computer monitor. It shows a dark-themed code editor with various lines of code in different colors (blue, green, yellow). At the bottom, a taskbar is visible with several application icons, including what looks like a web browser, a file explorer, and some development tools. The overall image is out of focus, emphasizing the text overlay.

More About TextBox

Definition

TextBox Properties

 Control how text is entered, displayed, edited, and positioned in a Windows Forms TextBox.

Explanation

Focus

 Gives the TextBox input focus so the user can start typing.

MaxLength

 Limits the maximum number of characters the user can enter.

Password

 Hides entered characters, commonly used for password input.

RightToLeft

 Controls right-to-left text direction and layout.

Locked

 Prevents the TextBox from being moved or resized in the Designer.

Multiline

 Allows the TextBox to contain multiple lines.

WordWrap

 Automatically moves text to the next line when it reaches the control's edge.

ReadOnly

 Prevents the user from editing the text while still allowing selection and copying.

Dock

 Controls how the TextBox is positioned relative to its parent container.

BorderStyle

 Controls the appearance of the TextBox border.

Procedure

1. Set the required TextBox properties.
2. Use Focus() to give the TextBox input focus.
3. Configure text length, password display, and text direction.
4. Configure multiline and word wrapping when needed.
5. Use ReadOnly when the user should only view the text.
6. Use Dock and BorderStyle to control layout and appearance.

💡 Example

```
txtName.Focus();  
txtName.MaxLength = 20;  
txtPassword.UseSystemPasswordChar = true;  
txtMessage.Multiline = true;  
txtMessage.WordWrap = true;  
txtResult.ReadOnly = true;  
txtName.Dock = DockStyle.Top;  
txtName.BorderStyle = BorderStyle.FixedSingle;
```

➡ Result

- ◆ Focus() → TextBox receives input focus.
- ◆ MaxLength = 20 → Allows up to 20 characters.
- ◆ UseSystemPasswordChar = true → Hides entered characters.
- ◆ Multiline = true → Allows multiple lines.
- ◆ WordWrap = true → Wraps long text onto new lines.
- ◆ ReadOnly = true → Prevents editing.
- ◆ DockStyle.Top → Places the TextBox at the top of its parent.
- ◆ BorderStyle.FixedSingle → Displays a single-line border.

Note

- ◆ Locked is mainly used in the Windows Forms Designer.
- ◆ ReadOnly affects text editing at runtime.
- ◆ ReadOnly still allows the user to focus, select, and copy the text.

Comparison

ReadOnly

- ✓ Prevents editing at runtime.
- ✓ Can still receive focus.
- ✓ Text can usually be selected and copied.

Locked

- ✓ Prevents moving or resizing in the Designer.
- ✓ Does not affect text editing at runtime.
- ✓ Used for form design.

⊘ Warning

- ◆ Locked does not prevent the user from typing at runtime.
- ◆ ReadOnly does not disable the TextBox; it only prevents editing.

✦ Summary

- ✓ TextBox properties control its behavior, layout, and appearance.
- ✓ Focus → gives input focus.
- ✓ MaxLength → limits characters.
- ✓ Password → hides entered characters.
- ✓ RightToLeft → controls text direction.
- ✓ Locked → locks the control in the Designer.
- ✓ Multiline → allows multiple lines.
- ✓ WordWrap → wraps long text.
- ✓ ReadOnly → prevents editing.
- ✓ Dock → controls positioning.
- ✓ BorderStyle → controls the border.

Thank you 😊
