LinkLabel

Definition

LinkLabel

-  Windows Forms control used to display clickable hyperlink text.
-  It can open websites, files, email addresses, or other links.
-  A LinkLabel can contain one or multiple links.

Explanation

LinkClicked Event

-  Triggered when the user clicks a link.
-  The event handler receives information about the clicked link.

LinkVisited

-  Setting LinkVisited = true marks the link as visited.
-  It can change the link to the configured VisitedLinkColor.

Process.Start()

-  Used to open the URL through the operating system.
-  In modern .NET applications, the URL is commonly opened using the system shell.

Procedure

1. Add a LinkLabel to the Windows Form.
2. Set the Text property.
3. Configure the link colors and appearance.
4. Handle the LinkClicked event.
5. Set LinkVisited to true.
6. Use Process.Start() to open the URL.

💡 Example

```
private void lkLGoogle_LinkClicked(object sender, LinkLabelLinkClickedEventArgs e)
{
    lkLGoogle.LinkVisited = true;
    System.Diagnostics.Process.Start("https://www.google.com/");
}
```

➡ Result

- ▣ The form displays a clickable Google link.
- ▣ Clicking the link marks it as visited.
- ▣ The default browser opens Google.

Note

- ◆ Text → displays the text of the control.
- ◆ LinkColor → sets the normal link color.
- ◆ ActiveLinkColor → sets the color while clicking.
- ◆ VisitedLinkColor → sets the color of visited links.
- ◆ LinkVisited → indicates whether the link was visited.
- ◆ LinkArea → defines which part of the text is a link.
- ◆ Links → provides access to the LinkLabel's links.
- ◆ LinkBehavior → controls the link's visual behavior.
- ◆ AutoSize → adjusts the control size to its content.

Comparison

LinkLabel

- ✓ Designed specifically for clickable links.
- ✓ Provides the LinkClicked event.
- ✓ Supports visited and active link colors.
- ✓ Supports multiple links.

Label

- ✓ Mainly used to display text.
- ✓ Does not provide built-in hyperlink functionality.
- ✓ Requires custom handling if clickable behavior is needed.

⊘ Warning

- ◆ LinkLabel does not automatically open a website just because its text looks like a link.
- ◆ LinkVisited = true only marks the link as visited; it does not open the URL.
- ◆ Process.Start() behavior depends on the .NET version and operating system.

✦ Summary

- ✓ LinkLabel creates clickable links in Windows Forms.
- ✓ LinkClicked → handles link clicks.
- ✓ LinkVisited → marks a link as visited.
- ✓ LinkColor → controls the normal link color.
- ✓ VisitedLinkColor → controls the visited color.
- ✓ LinkArea / Links → define and manage links.
- ✓ Process.Start() → opens the URL.

Thank you 😊
