

The background is a blurred image of a computer monitor. It shows a dark-themed code editor with various lines of code in different colors (blue, green, yellow). At the bottom, a taskbar is visible with several application icons, including what looks like a web browser, a file explorer, and some development tools. The overall image is out of focus, emphasizing the text overlay.

C# Level 1 MonthCalendar

C#

Level 1

MonthCalendar

Definition

MonthCalendar Control

-  Windows Forms control used to select a date or a range of dates.
-  The selected range can be accessed through the `SelectionRange` property.

Explanation

SelectionRange

-  Represents the complete selected date range.
-  SelectionRange.Start → first selected date.
-  SelectionRange.End → last selected date.
-  If only one date is selected, Start and End contain the same date.

Date Conversion

-  ToShortDateString() converts a DateTime value into a short date string.
-  The displayed format depends on the computer's culture settings.

Procedure

1. Add a `MonthCalendar` control to the form.
2. Select a single date or a date range.
3. Access the selected range using `SelectionRange`.
4. Use `Start` or `End` to get a specific date.
5. Convert the date to text when displaying it.

💡 Example

```
private void button1_Click(object sender, EventArgs e)
{
    MessageBox.Show(monthCalendar1.SelectionRange.ToString());
}
private void button2_Click(object sender, EventArgs e)
{
    MessageBox.Show(monthCalendar1.SelectionRange.Start.ToShortDateString());
}
private void button3_Click(object sender, EventArgs e)
{
    MessageBox.Show(monthCalendar1.SelectionRange.End.ToShortDateString());
}
```

➡ Result

- ◆ Single date:
10/09/2026
- ◆ Date range:
10/09/2026 → 15/09/2026
- ◆ Start returns 10/09/2026.
- ◆ End returns 15/09/2026.

Note

- ◆ `SelectionRange` → gets or sets the complete selected range.
- ◆ `SelectionStart` / `SelectionEnd` → directly access or modify the start and end dates.
- ◆ `MaxSelectionCount` → limits the number of selectable days.
- ◆ `MinDate` / `MaxDate` → define the allowed date range.
- ◆ `TodayDate` → specifies the date considered as today.
- ◆ `FirstDayOfWeek` → specifies the first day of the week.
- ◆ `CalendarDimensions` → controls how many months are displayed.
- ◆ Important Events
 - `DateChanged` → occurs when the selected date or range changes.
 - `DateSelected` → occurs when the user selects a date or range.

⊘ Warning

- ◆ The selectable range is limited by `MaxSelectionCount`.
- ◆ `ToString()` and `ToShortDateString()` produce text based on the `DateTime/culture` settings.

✦ Summary

- ✓ `MonthCalendar` allows selecting dates or date ranges.
- ✓ `SelectionRange` → complete selected range.
- ✓ `Start` / `SelectionStart` → first selected date.
- ✓ `End` / `SelectionEnd` → last selected date.
- ✓ `MaxSelectionCount` → limits the number of selected days.
- ✓ `DateChanged` / `DateSelected` → handle selection changes.

Thank you 😊
