Things Affect Program
Speed & Efficiency

The background of the slide features a complex, abstract network of thin, dark lines crisscrossing over a lighter, textured surface. In the lower portion of the image, the silhouettes of several people are visible, appearing to be in a collaborative setting, possibly a meeting or a workshop, with one person standing and others seated or leaning over. The overall aesthetic is technical and interconnected.

**Things Affect Program Speed &
Efficiency**

Things Affect Program Speed

Things that affects Speed:

Program Speed Algorithm fi (hardware, OS, and CPU).

Regardless of used algorithm, printing an array[100] items is faster if you run it on a faster computers.

So as a developer it's not my problem to take care of the hardware.

But it is My Problem to take care of algorithm Therefore we need to focus on Algorithms only on writing code.

Things that affects Speed:

Algorithm Time Space.

So, Timefi Space are things that we should focus on

Thank you 😊
